This document is referred to as a half-bibliography because it is limited deliberately, with few exceptions, to entries in support of the thesis of an oil peak formulated by M. King Hubbert and extended by his successors. Alternatively, it is referred to as a half-bibliography because it is limited principally to entries relating to the problem and not solutions to the problem. There may be cases where the links do not work directly and have to be cut and pasted to the user's Internet address line. If even a pasted link does not work, try a Google on the author and/or title. I would appreciate notice of amended links, dead links, and potential new entries. Inclusion in this document does not vouch for the accuracy of all the listed items. As the issue of peak oil gains increasing currency, more and more commentaries on the topic are written by authors who are relatively new to the issue and can sometimes garble matters. More egregious examples of such garbling have been omitted from the list. This draft includes items from recent research at the M. King Collection, American Heritage Center, University of Wyoming. It is among the last drafts of this bibliography, because material on the subject by now is being generated almost too fast to manage.
